

[illegible]

10 Preferred ligand components are bidentate (bind to the transition metal at two or more sites) and include a nitrogen - transition metal bond. The transition metal - ligand complex is generally cationic and associated with a weakly coordinating anion.

2 A catalyst system of the present invention may further comprise a
15 Lewis or Bronsted acid. The Lewis or Bronsted acid may be complexed
with the ligand component of the transition metal-ligand complex.
